LeadSquared QA Test

Name: Ali Muhammed

Reg. no: 17BCE0463

1. Types of customers possible as per the given rules:

   - New customer & willing to sign up for a new loyalty card & not having a discount coupon
   - New customer & not willing to sign up for a new loyalty card & not having a discount coupon
   - New customer & willing to sign up for a new loyalty card & having a discount coupon
   - New customer & not willing to sign up for a new loyalty card & having a discount coupon
   - Existing customer & holding a loyalty card & not having a discount coupon
   - Existing customer & not holding a loyalty card & not having a discount coupon
   - Existing customer & holding a loyalty card & having a discount coupon
   - Existing customer & not holding a loyalty card & having a discount coupon

Discount %	Type of Customer							
	• New customer • Loyalty card sign up • No discount coupon	• New customer • No loyalty card sign up • No discount coupon	• New customer • Loyalty card sign up • Discount coupon	• New customer • No loyalty card sign up • Discount coupon	• Existing customer • Loyalty card • No discount coupon	• Existing customer • No loyalty card • No discount coupon	• Existing customer • Loyalty card • Discount coupon	• Existing customer • No loyalty card • Discount coupon
0		x				x		
10					x			
15	x							
20			x	x				x
30							x	

2. The given argument isn't reasoned well enough as it is drawn to conclusion from an earlier assumption. The fact that Ronnie is opening a big shop nearby doesn't necessarily mean his Shop is doing well in the given location. It can also be possible that Ronnie has enough Capital saved to invest into a new shop regardless of the Profit and income from this shop. Also, if his business is going well in this location why set up a bigger shop in a nearby town when he can expand his shop in his current location. Now in Jenny's case she might have taken a severe hit in capital in the shifting process due to some mishap or slip-up and hence her new Beauty Parlour might be providing less satisfactory services. And so her Business will have hit a low point. But if the initial assumption taken is true, then the Argument stands and is well reasoned. Hence to make this Argument logical the initial assumption should be supported with more facts and background information on these individual entrepreneurs so as to make the reasoning solid and to tie up loose ends like the ones mentioned earlier.

3. Test cases for a wireless mouse:

- Check whether right-click and left-click buttons are working.
- Check whether scroll button is working.
- Check the pressure needed to click the mouse buttons.
- Check whether double click is working.
- Verify the time duration between two mouse clicks to consider it as a double click.
- Verify the mouse pointer speed on the screen.
- Verify whether drag and drop function is working.
- Check the dimensions of the mouse whether it is suitable for work and have a good grip.
- Check whether the mouse is working on all allowed surfaces smoothly.
- Check the range up to which the mouse remains operational.
- Check the battery requirement of the mouse.
- Check whether the mouse becomes idle when not in use for a given time duration.
- Check whether the mouse is having an ON/OFF button.
